

SUSTAINABLE PROCUREMENT

Submitted to

Khalifa University, Abu Dhabi

23-May-25

ICV IMPLEMENTATION

Royal Catering has successfully attained **46.10% In-Country Value Certification as of 2025**. This achievement is a direct result of robust strategic decisions to support local produces main in F&B in return to reduce the carbon foot prints significantly,

VALUE OF PROCUREMENT FOR ICV IN 2025 (4 months)		VOLUME OF PROCUREMENT FOR ICV IN 2025 (4 months)	
TOTAL VALUE	13 M	TOTAL VOLUME	1659 TON
LOCAL PRODUCTS	4.9 M	LOCAL PRODUCE	858 TON
	38%		52%
	100%		100%

PROCUREMENT OF DISPOSABLES

Royal Catering is actively procuring biodegradable and nature-friendly paper products for its food delivery operations. This aligns with a growing global and local emphasis on sustainability and reducing environmental impact. We adhere to this policy strictly for Khalifa University.

November 2022

Cleenol and Eco-Labeling

Cleenol as a business has over the course of its history always taken steps to ensure our impact on the environment has been contained. From the early adoption of our internal environmental management system to our obtaining ISO14001 in 2010.

As a business we have also previously engaged with recognised bodies, such as EU Flower / Ecotabel for some of our products. Since Brexit, and the separation of the UK from European legislation norms, the UK finds itself without an authorising body to pick up responsibility for managing such certifications and currently has no suitable equivalent.

As a result, Cleenol has developed a new range of products under the edenscen brand name. The edenscen range, provides solutions for 80% of daily cleaning and hygiene needs, and has been designed around the following principles and ingredients:

- RSPO certified palm oil derivatives
- no animal derived products
- cruelty free
- minimal petrochemical derived products
- no parabens, formaldehyde, CM/MT, triclosan, phosphates, chlorine bleaches, optical brighteners, quaternary ammonium compounds
- VOC free and phosphate, EDTA, NTA free
- recyclable / recycled packaging
- 100% bio-based surfactant - made by using bio-based ethylene oxide which is manufactured from biomass ethanol.
- bio-ethanol, naturally derived acids, sugar-based surfactants, bio-based solvents, low impact preservatives

These are all key criteria that are integral to the EU Flower certification process, amongst others. It is also this range that we will be submitting for EU Flower certification, a process which we expect to take approximately 12 months. Combined with our further development of super concentrated formulations to help reduce the plastic content of our solutions, these form the pillars of Cleenol's commitment to a cleaner, safer world.
